

Spy Camera: T-100 camera which was built into various objects including cigarette lighters during the 1970s onwards. The camera was used mainly to photograph documents (100 images on a 4mm x 15mm film). A T-100 camera was used by Aleksandr Ogorodnik to pass diplomatic cables to the US (he was betrayed and took a suicide pill supplied by the CIA in 1977). Tap to 'explode' the camera and see its construction.

T-100 Document camera

Hold *exactly* 11 inches above document..

Will take **100** pictures

Was **concealed** in everyday objects
such as pens and cigarette lighters
